Orb Optronix Opens Pacific Northwest Office

KIRKLAND, Washington (March, 05, 2007) – Orb Optronix, a leader in optical-electrical system design and integration, announced today the opening of it's new Pacific Northwest facility located at 1003 7th Ave. in Kirkland, WA

"This new facility will house our new LED Test Labs, along with our Product Development Group and Machine Shop," said Rand Lee, Vice President of Engineering.

Orb Optronix is the leading Pacific Northwest innovation partner providing services for optical, electrical and software design, and integration of opto-electronic systems. Orb Optronix was founded upon its commitment to solving complex interdisciplinary engineering challenges where optical performance is of primary concern. Orb Optronix offers optical design, electronic design, firmware, parallel processing, image processing, software development, and mechanical engineering thereby providing their customers with a uniquely qualified resource for integrated systems approach.

Orb is committed to helping our partners achieve success in an increasingly complex world of cross disciplinary interactions impacting optical performance. To find out more, please visit OrbOptronix.com
