FOR IMMEDIATE RELEASE

## **Orb Optronix Expands Pacific Northwest Office**

**Orb Optronix doubles the size of its facility, offering expanded laboratory services for LED lifetime testing and product development.**

KIRKLAND, Washington (June 17, 2010) – Orb Optronix, Inc., the industry leader in LED characterization products, announced the expansion of its Pacific Northwest office, located at 1003 7<sup>th</sup> Ave, Kirkland, WA. The larger facility doubles the floor space for the company to make room for more extensive LED testing programs and product assembly.

“As demand for standardized testing of LEDs has grown, so has the company,” says Orb Optronix President Rand Lee. “The expanding need to verify and develop new forms of lighting and other LED based products has been a major component in our company’s growth. We wanted room to provide world class testing services to our clients so they can help shape the future of solid-state lighting. The additional space has also increased our product development, R&D, and assembly capabilities.”

Orb Optronix offers LED lifetime testing to the IESNA LM-80 standard, LED measurement services including PWM and Single Pulse ETO LED Characterization, DC [ETO LED Characterization](#), [Angular Distribution Characterization](#), [IES Photometric testing](#), and [LED Eye Safety Testing](#), LED measurement instruments, and optical, electrical and mechanical engineering services related to LED-based product development.
